---

### PROFESSIONAL SUMMARY

Frontend Developer with 8+ years of experience architecting and scaling enterprise Angular applications, including platforms managing tens of thousands of services for hundreds of client organizations. Owns frontend architecture end-to-end – aligning Domain-Driven Design with business logic, driving technology stack decisions, and leading complex Angular upgrades – while partnering closely with .NET backend and QA teams across security, energy, sustainability, and retail industries. Increasingly leverages AI-assisted development (Claude, GitHub Copilot, Cursor) to accelerate refactoring, componentization, and framework upgrades without sacrificing quality.

### CORE SKILLS

**Frontend:** Angular | TypeScript | RxJS | NgRx | Angular Material | SCSS | Reactive Forms | REST API integration | Angular upgrades

**Architecture & Code Quality:** Modular architecture | Domain-Driven Design (DDD) | Clean Code | Refactoring | Legacy code modernization | Scalable UI systems

**Backend Collaboration:** .NET / C# | REST APIs | API integration | Debugging | Performance improvements

**Testing:** Jasmine | Karma | Unit testing | Testing legacy code

**DevOps & Workflow:** Azure DevOps | Git | CI/CD | Docker (basic) | Code reviews | Enterprise workflows

**AI-assisted Development:** Claude (Claude Code) | GitHub Copilot | Cursor | Antigravity | Prompt engineering | AI-assisted refactoring & debugging | Agentic coding workflows

### PROFESSIONAL EXPERIENCE

#### INWEDO – Frontend Developer

2017 – Present | Angular, TypeScript, RxJS, NgRx, .NET, Azure DevOps

- Acted as lead frontend engineer across multiple enterprise platforms, partnering directly with tech leads on architecture decisions, technology stack selection, and alignment of Domain-Driven Design with business logic.
- Directed multiple complex Angular version upgrades, including major-version migrations, coordinating library replacements and dependency changes with minimal disruption to production systems.
- Refactored legacy codebases into reusable, componentized libraries, reducing duplication across views and business logic.
- Collaborated cross-functionally with backend and QA teams (typical composition: 2–3 FE, 2–3 BE, 1–2 QA), debugging API and business-logic issues and identifying root causes.
- Adopted AI-assisted development practices (Claude, GitHub Copilot, Cursor) to accelerate refactoring, componentization, and Angular upgrade work.

#### Security Monitoring Platform – Key Project

Owned frontend architecture as lead frontend engineer for a platform managing tens of thousands of monitored services for hundreds of client organizations. Redesigned the device configuration workflow, cutting alarm-subscription and monitoring-terminal setup time by several multiples. Worked within a team of 3 frontend, 3 backend, and 2 QA engineers, collaborating with dependent teams on shared API and business-logic layers.

#### Energy Management Platform (US & Canada)

Built frontend features and data visualizations forecasting energy costs for property managers overseeing several thousand buildings.

#### Sustainability Collaboration Platform (Scandinavia)

Led frontend development (team of 2 FE, 2 BE, 1 QA) on a platform enabling farmers and organizations to collaborate on carbon-reduction initiatives.

#### Retail Operations Platform

Replaced Excel-based workflows with a purpose-built Angular application across several hundred sporting-goods retail stores, cutting process time by several multiples.

### PREVIOUS EXPERIENCE

B52 – Key Account Manager | 2012 – 2017

B52 – Sales Division | 2006 – 2012

### EDUCATION

University of Łódź – Faculty of Geographical Sciences

## **CERTIFICATES**

Cambridge English Level 1 Certificate in ESOL International (Business Vantage)

## **LANGUAGES**

Polish – Native | English – B2/C1 | German – Basic

## **INTERESTS**

Endurance sports (cycling, running, gym), Formula 1, automotive restoration, photography, mountain hiking & wild camping.
